MEMORY HICORDER MR6000

The MR6000 overcomes all barriers to reach new ground and meet challenges that are yet to be seen.

World class specifications, operability and design - Hioki's newest memory recorder has been re-engineered from top to bottom, delivering unprecedented performance that will change how you look at waveform recording.

Redefining the world standard for recorders - that is the Hioki MR6000.

Series-Leading Measurement Performance

High-speed isolated measurement at 200 MS/s Up to 32 ch in the analog unit and up to 128 ch in the logic unit

The Hioki Memory HiCorder lineup now includes a powerful input unit that unlocks the full measuring potential of the MR6000. The HIGH SPEED ANALOG UNIT U8976 boasts the highest sampling rate in its entire series, an order of magnitude faster than conventional models, enabling the unit to perform isolated measurement at 200 MS/s. Combine multiple modules of the 4ch ANALOG UNIT U8975, which provides 4 channels of input with a speed of 5 MS/s at 16 bits, to perform multi-channel measurements up to 32 channels. Make the most of the Memory HiCorder's capabilities as we continue its development to meet your advanced measurement needs.

Blazing fast, never-fail sampling Record high-precision waveforms

NEW HIGH SPEED ANALOG UNIT U8976

You need accurate detection of switching waveforms in inverter evaluation tests, which requires a high level of efficiency. We developed the HIGH SPEED ANALOG UNIT U8976 to meet those needs. In addition to high-speed sampling at 200 MS/s, the unit supports frequency bands up to 30 MHz. Adapted to the Memory HiCorder's direct input feature, it supports inputs up to 400 V DC.

Isolated input with optical isolation devices

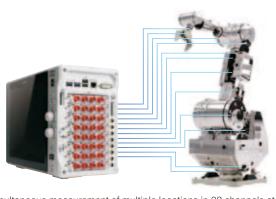

Connections between analog input channels, and between the input channel and the main unit, are fully isolated. This means that, unlike an oscilloscope, measurements can be made without concern with negative effects from potential differences.

Install up to 8 units with 4 channels each Measure multiple points simultaneously

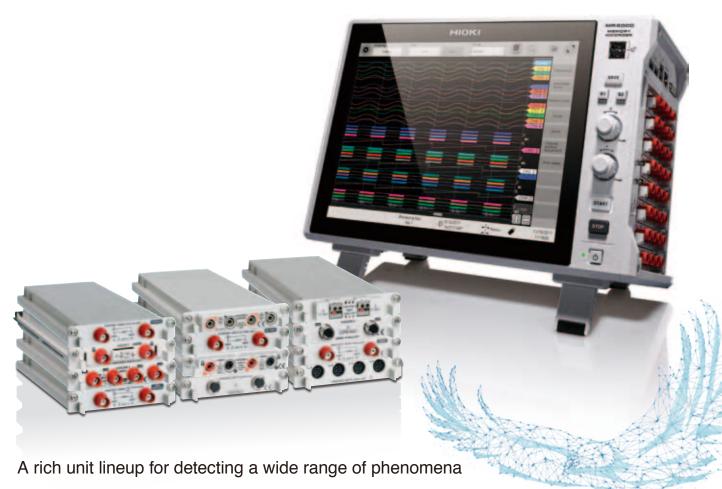

NEW 4ch ANALOG UNIT U8975

Our lineup now includes a 4ch Analog Unit with 4-channel input on a single unit, improving the multi-channel measurement performance of the Memory HiCorder. The unit supports direct inputs up to 200 V DC, and its sampling rate is five times faster than conventional models. In addition, its high 16-bit resolution allows you to measure voltage with superior accuracy.

Simultaneous measurement of multiple locations in 32 channels at 5 MS/s

Combine multiple units to record a range of phenomena.

A high-voltage unit with a direct input of 1000 V DC is ideal for measuring global power lines, including uninterruptible power supplies (UPS) and commercial power supplies.

Use multiple logic units to measure relay ON/OFF signals or PLC (programmable logic controller) signals across up to 128 channels simultaneously.

Unit interchangeability

The unit types compatible with the MR6000 are identical to the ones compatible with the MEMORY HiCORDER MR8827, MR8847A, MR8740, and MR8741. Use any of the 12 types listed in the unit selection guide below. However, the U8975 and U8976 can only be used with the MR6000.

Concentration of sensing technologies with superior accuracy: A rich set of functions suitable for all measuring purposes

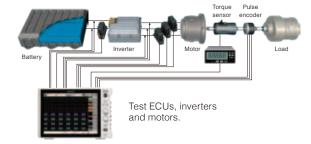

The sensing technology that serves as the inlet for measurement data is essential for detecting various phenomena in multiple channels. The MR6000 is a high-spec model that fully utilizes the capacity of Hioki's high-precision sensors.

Combine the CURRENT UNIT 8971 and a current probe or current sensor designed and manufactured by Hioki to use the system within a wide temperature range or measure large currents with a high level of precision at solar power plants or development sites for EVs/HEVs. The convenient, built-in sensor identification function lets you simply connect the sensor to easily configure the scaling settings through automatic recognition.

Combine the HIGH SPEED ANALOG UNIT U8976 and a Hioki current probe or clamp-on probe for high-precision wideband observation of current waveforms.

Furthermore, install the optional PROBE POWER UNIT Z5021 to drive these probes from the MR6000 main unit.

Triggers that detect targeted events

Set triggers on any channel to record data whenever an event occurs.

Level trigger
Compares to one voltage value.

Window trigger
Compares to two voltage values.

Voltage drop trigger
Detects voltage drops in commercial power lines.

Period trigger
Monitors periods.

Glitch trigger
Detects anomalies in pulses.

Pattern trigger
Compares when the logic signal is ON/OFF.

Setting multiple triggers for a single channel

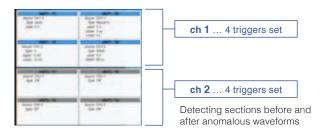

Set up to 4 triggers for a single channel.

If, for instance, you set the glitch, level, window-in, and window-out triggers for the same input waveform, that waveform is monitored according to the set trigger conditions.

Various triggers × Up to 4 Settable for any channel

Observe long-term fluctuations without any sampling rate losses

The system uses the envelope measurement method to record maximum and minimum values at set intervals while performing oversampling at 100 MS/s.

The internal memory has a capacity of 1 G-words, which ensures that the measuring process continues for a long time without any data losses. Save data in real time while measuring.

Numerical calculation function boasting high analytical performance

ALL Installed in MR6000, MR6000-01

The measured waveforms are analyzed with numerical parameters.

The MR6000 features some new numerical calculations including overshoot and undershoot calculations. In addition to analog and logic channels, this model performs calculations on real-time waveform processing channels. It also features the numerical judgment function.

Calculate measurement data during measurement :

Real-time waveform processing

The MR6000-01 features powerful optional equipment for real-time waveform processing. This function performs the four arithmetic operations (addition, subtraction, multiplication, and division), differentiation calculations, or integration calculations during the measuring process. This lets you use waveforms to check the calculation results while measuring. The equipment also saves and computes the calculation results numerically after the measuring process.

Highest Transfer Speed in the Entire Series

Data transfer up to 32 times faster compared to conventional models Outstanding real-time save function that saves data during measurement

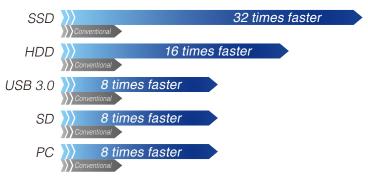

The MR6000 features a brand new interface that makes data transfer up to 32 times faster.

In addition, faster internal processing allows data to be saved to external media in real time during measurement.

Drastically increased data transfer speed

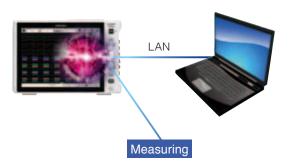

Data transfer to storage devices is now up to 32 times faster. While conventional models transferred data at 1 MS/s in a single channel, the MR6000 transfers data for 32 channels.

*Compared to other recorders in the Hioki Memory HiCorder series.

Saving data directly to your PC

Transfer measurement data directly to your PC by using the FTP sending function together with the real-time save function. This makes it easier to observe data after the measuring process.

^{*}Results vary according to measurement conditions

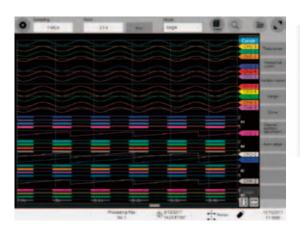

Longest Continuous Recording in the Entire Series

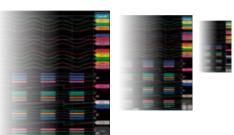

Long-term recording and high-speed sampling in multiple channels All in a single measurement

The real-time save function controls the available measurement duration without relying on the capacity of the internal storage memory.

For long-term recording, we recommend a high-capacity SSD or HD unit. You can also use a more convenient USB memory stick or SD memory card.

All phenomena can be recorded at a high sampling rate over a long period of time. This feature is ideal for situations where it is hard to predict the nature of a phenomenon or for measurements that can only be performed once. When saved in real time, data is split into several 512 MB files.

Long-term measurements for more efficient testing

The real-time save function boasts high-speed sampling and multi-channel measurements.

Perform an approximately 1-hour measurement at 20 MS/s in 2 channels or 1 MS/s in 32 channels.

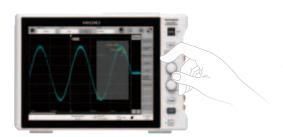

Fast and convenient touch screen Operation as smooth as silk

The capacitive touch screen delivers intuitive operability.

Select a setting item directly by tapping the screen, and use your fingers to enlarge the part you want to see.

The new user interface makes setting measurement items for multiple channels easier compared to the more complicated conventional models where you had to press the keys several times to configure a setting.

▲ Simply tap the screen to switch between the items you want to set.

Easy method for pinpointing a specific waveform within large amounts of measurement data

Set the peak values or trigger conditions you want to search for to have the relevant data retrieved and displayed automatically.

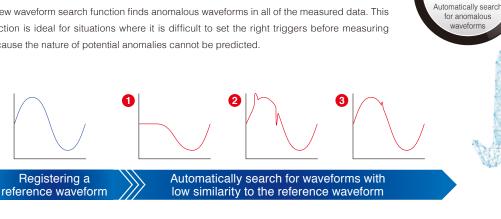

Our new Memory HiCorder Concierge function automatically calculates the characteristics of the reference waveform you have set and searches all of the measured data to detect and array any waveforms with low similarity as anomalous waveforms.

This drastically reduces the amount of time required to search for anomalies by eliminating the need to scroll through measured waveforms and check them visually.

Memory HiCorder Concierge

Use the Concierge to look for anomalous waveforms.

A new waveform search function finds anomalous waveforms in all of the measured data. This function is ideal for situations where it is difficult to set the right triggers before measuring because the nature of potential anomalies cannot be predicted.

Rich set of search functions

Peak search

Search for the maximum value, minimum value, local maxima, or local minima in all of the measured data, and mark the search point in the waveform.

Trigger search

Set trigger conditions for all of the measured data again to search for points where the conditions are fulfilled, even if no triggers were set during the measuring process.

Jump

New function Waveform

Search

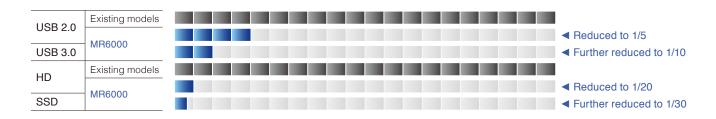

Jump to an event mark you made while measuring, to the cursor position on the display, or to the location measured at a specified time.

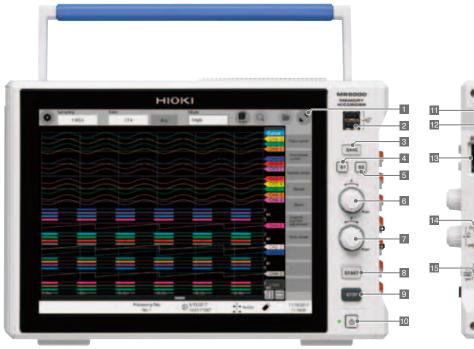

Radically improved data saving time

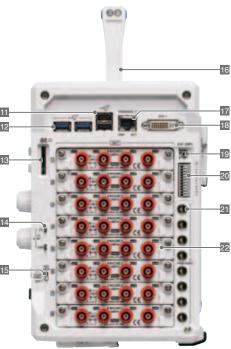

Transferring very large amounts of data measured over a long period of time used to be very time-consuming.

The MR6000 features a brand new interface and faster internal processing, reducing the time required to save measurement data to media.

This saves you the trouble of waiting for data to be saved and improves work efficiency.

Operability and visibility suited for a variety of work environments

Ergonomical operating angle

Our search for a touch screen with the best operability and visibility angle led us to develop retractable feet that maximize those two important attributes. Tilting the MR6000 with the feet reduces the strain on your wrists when you use the device on a desk, and keeps your line of sight at a natural level. The rear side also features the same retractable feet, making is easy to use the device on the floor.

Space-saving size

We have achieved a design that is compact while still delivering blazing fast processing speeds by using thermal liquid analysis to optimally position the air inlets, heating components, and cooling fans. The smaller form factor requires less space for installation, making the device just right for tight workspaces.

Easy multi-touch

Horizontal and vertical

When compared to 8861-50

Easy handling

Convenient long handle

The rubber handle boasts excellent grip and makes it easy to carry the device with either one or both hands. The grips on either side of the device can also be used to lift it with both hands.

Simple protectors on the top and bottom right side of the device protect the interface and unit input terminals from sudden physical shocks.

Sleek details

The bevelled chassis edges give the device a compact and sleek look. The left side is slightly curved with slits to match the mesh of the air outlet. The air outlet is therefore in harmony with the design of the flat and solid-looking chassis. The simple and refined appearance achieved by these efforts well suits a device used for R&D purposes.

	Level trigger	Triggering occurs when the set level rises (falls).
	Voltage drop trigger	Triggering occurs when peak voltage drops below the set level. (For a 50 Hz, 60 Hz commercial power supply only) *Disabled when sampling rate is set to 200 MS/s. *Not available with mR8990 or 8970 *Not available with envelope setting
	Window trigger	Sets the upper and lower limit for trigger level. Triggering occurs when leaving (OUT) or entering (IN) the area. *Disabled when sampling rate is set to 200 MS/s.
Analog triggers	Period trigger	Sets the period reference value and cycle range. Triggering occurs when the rising (falling) reference value period is measured and determined to be outside or within the cycle range. *Disabled when sampling rate is set to 200 MS/s. *Not available with MR8990 or 8970 *Not available with envelope setting
	Glitch trigger	Sets the reference value and pulse width (glitch width). Triggering occurs if the value is below the set pulse width from rising failing of the reference value. *Disabled when sampling rate is set to 200 MS/s. *Not available with MR8990 *Not available with envelope setting
	Specifying events	Specifying events (1 to 4000) Counts the number of times conditions were fulfilled for each trigger source. Triggering occurs when the set number of times is reached. *Not available when the trigger conditions are set to AND

- The 9318 comes with the CURRENT UNIT 8971

Other current sensor types

The MEMORY HiCORDER can be used with various types of current sensors and probes.
For details, see product information on Hioki's website

A separate power supply (CT9555) is required in order to use a high-

Precautions for connecting current sensors and current probes

*Some combinations may not allow the devices to be connected simultaneously.

*Up to 4 CURRENT UNITS 8971 can be connected to the MEMORY HICORDER main unit, and up to 8 current sensors can be used, including those connected to the PROBE POWER UNIT 75021

There is no limit if you connect a current sensor to the voltage input analog unit.

R&D Tests and Critical Analyses Meeting the High Demands of a Broad Range of Industries

High-speed 200 MS/s measurement of inverter waveforms

Perform high-speed isolated recording across 16 channels at 200 MS/s by installing 8 units of U8976.

MEMORY HICORDER	MR6000	1 unit
HIGH SPEED ANALOG UNIT	U8976	8
10:1 PROBE	9665	16

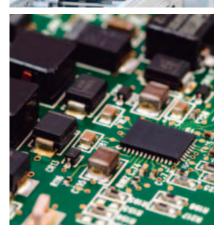

Multi-channel measurement for ECU development

Perform multi-channel recording across 32 channels at 5 MS/s by installing 8 units of U8975.

MEMORY HICORDER	MR6000	1 unit
4ch ANALOG UNIT	U8975	8
CONNECTION CORD	L9790	32
ALLIGATOR CLIP	L9790-01	32

Perform mixed multi-channel measurements across 16 analog and 64 logic channels by installing 4 units of U8975 and 4 units of 8973.
