

# High-precision Power Analysis Through Sensing Technology 

## Superior affinity between power analyzers and current sensors

Hioki develops both power analyzers and current sensors. Advanced sensing technology is a prerequisite for accurate power analysis. Given the high affinity between current sensors and power analyzers, precise power analysis is possible.

For high voltage measurements above 1500 V AC/DC HIGH VOLTAGE DIVIDER VT1005 Divides and outputs voltages of up to 5000 V

The current sensor method is an approach to making measurements that closely resemble the actual operating environment

Measurement example using the current sensor method

Temperature after current sensing (Continues for 10 min .)

Measurement example using the direct wiring method

Temperature after
current sensing
(Continues for 10 min .)

1 Wiring resistance loss due to long routing
2 Leakage current loss due to capacitive coupling
3 Instrument loss due to shunt resistance

## Important points in evaluating high-efficiency inverters

When evaluating the power conversion efficiency of an inverter, the inverter's input and output power are measured, and its efficiency is calculated. PWM (pulse width modulated) inverter output, which has been widely used in recent years, contains the fundamental and its harmonic, the switching frequencies, and its harmonic component. Since switching frequencies are high, current sensors that can measure over a wide bandwidth are needed for the measurement process.

For high current measurements above 2000 A
SENSOR UNIT CT9557
The current sensor output is added and output Accurately measures large currents up to 8000 A (4 wires)

Current sensor with defined phase accuracy can accurately measure power

-- PW8001+U7005 (1500 V/50 A range)
$\pm$
PW6001 (600 V/50 A range)

- PW3390 (150 V/50 A range)

HIOKI specifies the phase accuracy of current sensors for more accurate power measurement. By correcting the phase characteristics of the current sensor with a power analyzer, low power factor power can be accurately measured down to higher frequencies.

[^0]Power analyzer lineup

## Applications

## Power conversion efficiency evaluation of inverters

Measure input and output power for power conversion devices like inverters and calculate efficiency and loss.

Efficiency and loss calculations (PW8001)

Harmonic analysis of the 500th-order (PW8001)

Detect power conversion efficiency and loss

| Number of power measurement channels |  |
| :--- | :--- |
| PW8001 | Up to 8 channels (specified at time of purchase) |
| PW6001 | Up to 6 channels (specified at time of purchase) |
| PW3390 | 4 ch |

| Efficiency and loss calculations |  |
| :--- | :--- |
| PW8001 | Max.4 each for efficiency and loss (with Auto mode) |
| PW6001 | Max.4 each for efficiency and loss |
| PW3390 | Max.3 each for efficiency and loss |

The PW8001's Auto mode automatically switches calculation formulas depending on the direction of power flow. (Ordinarily, calculation formulas are switched manually depending on the direction of power flow.)

| Accuracy for <br> active power* | DC | $50 \mathrm{~Hz} / 60 \mathrm{~Hz}$ | 10 kHz |
| :--- | :---: | :---: | :---: |
| PW8001+U7005 | $\pm(0.02 \%+0.03 \%)$ | $\pm(0.01 \%+0.02 \%)$ | $\pm(0.05 \%+0.05 \%)$ |
| PW8001+U7001 | $\pm(0.02 \%+0.05 \%)$ | $\pm(0.02 \%+0.05 \%)$ | $\pm(0.2 \%+0.05 \%)$ |
| PW6001 | $\pm(0.02 \%+0.05 \%)$ | $\pm(0.02 \%+0.03 \%)$ | $\pm(0.15 \%+0.1 \%)$ |
| PW3390 | $\pm(0.05 \%+0.07 \%)$ | $\pm(0.04 \%+0.05 \%)$ | $\pm(0.2 \%+0.1 \%)$ |

${ }^{*} \pm(\%$ of reading $+\%$ of range)
Harmonics measurement

|  | Synchronization <br> frequency range | Maximum <br> analysis order |
| :--- | :---: | :---: |
| PW8001+U7005 | 0.1 Hz to 1.5 MHz | 500 th |
| PW8001+U7001 | 0.1 Hz to 1 MHz | 500 th |
| PW6001 | 0.1 Hz to 300 kHz | 100 th |
| PW3390 | 0.5 Hz to 5 kHz | 100 th |

The instrument can perform harmonic analysis for each channel's voltage, current, and active power and display the results. The PW8001 and PW6001 can analyze harmonics for individual channels, and they can simultaneously measure harmonics in multiple circuits at different frequencies.

Common-mode rejection ratio (CMRR)

|  | $50 \mathrm{~Hz} / 60 \mathrm{~Hz}$ | 100 kHz |
| :--- | :---: | :---: |
| PW8001+U7005 | 120 dB or greater | 110 dB or greater |
| PW8001+U7001 | 100 dB or greater | 80 dB typical |
| PW6001 | 100 dB or greater | 80 dB or greater |
| PW3390 | 80 dB or greater | - |

When evaluating an equipment that produces noise, such as an inverter, it is essential to consider how effectively the device can withstand noise.

## Evaluation of inverters and motors

Efficiency and loss can be calculated from the power on the input and output sides of inverters and motors. Torque meter and pulse encoder signals can be input to the power analyzer to simultaneously analyze and record the motor's torque, rotation speed, and mechanical output.

Motor analysis

| Number of motors that can be simultaneously analyzed |  |
| :--- | :--- |
| PW8001 | Max. 4 motors |
| PW6001 | Max. 2 motors |
| PW3390 | 1 motor |

Input signals from a torque meter and pulse encoder to analyze motor torque, speed, rotational direction, and electrical angle.
user-defined calculations (used when calculating motor parameters)

| PW8001 | Up to 20 equations can be set |
| :--- | :--- |
| PW6001 | Up to 16 equations can be set |
| PW3390 | - |

Set calculation formulas as desired and display the results in real time. Calculate Ld and Lq motor parameters from electrical angle measurements.

Correction of torque meter measurement error

| PW8001 | Zero correction, nonlinear correction*, friction correction* |
| :--- | :--- |
| PW6001 | Zero correction |
| PW3390 | Zero correction |

*Enter the calibration values and points for compensating the sensor's error to calibrate the torque meter's value.

CAN or CAN FD output function

The PW8001 can output measurement data to a CAN bus in real time as CAN or CAN FD signals, which can be recorded along with ECU data.

Measure a solar inverter's input and output power and calculate efficiency and loss. Evaluate power generation systems that require measuring high voltages and multiple circuits, such as a multi-string solar inverter.

Maximum input voltage

| PW8001+U7005 | 1000 V AC/DC, $\pm 2000$ V peak |
| :--- | :--- |
| PW8001+U7001 | 1000 V AC, 1500 V DC, $\pm 2000$ V peak |
| PW6001 | 1000 V AC/DC, $\pm 2000$ V peak |
| PW3390 | 1500 V AC/DC, $\pm 2000$ V peak |

Use the VT1005 (option) to measure voltages of up to 5000 V with a power analyzer.

IEC standard compliant harmonic and flicker measurement

|  | IEC harmonics <br> measurement <br> Yes* | IEC Flicker <br> Measurement |
| :--- | :---: | :---: |
| PW8001 | Yes | Yes* |
| PW6001 | - | - |
| PW3390 | - |  |

Measure harmonics in compliance with the IEC 61000-4-7 standard and flicker in compliance with the IEC 61000-4-15 standard.
*Hioki plans to offer this capability with a firmware upgrade (Ver. 2.0).
Multi-string solar inverters evaluation

| Optical link interface |  |
| :--- | :--- |
| PW8001 | Analysis of up to 16 channels* |
| PW6001 | Analysis of up to 12 channels |
| PW3390 | - |

Connect two power analyzers with the optical link interface to aggregate and analyze measured data on one instrument.
*Hioki plans to offer this capability with a firmware upgrade (Ver. 2.0).
